

## Problem of the Week

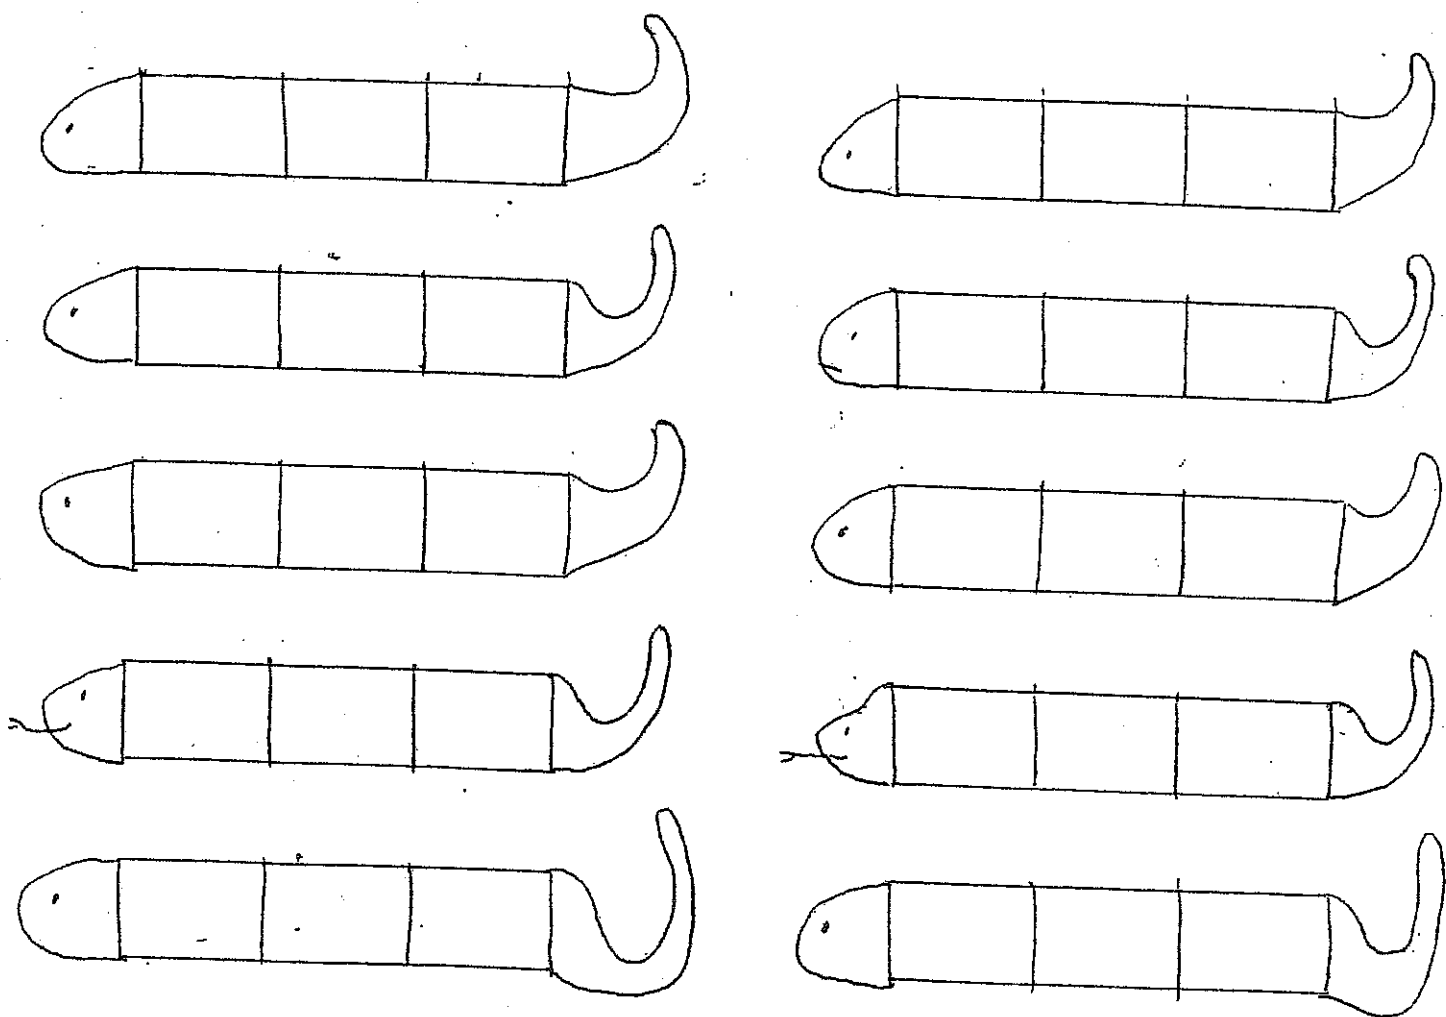

Each house needs gas, electric and water hook-ups. Can you draw lines to connect the utilities to each house? Rule: No utility lines may cross!!

If you think it's impossible can you explain why?

Would this problem work differently on different surfaces? (e.g. a sphere)

# Problem of the Week

Here are ten snakes. Using two colors, one to each rectangle, how many different snakes can you make?

What if we use 3 or more colors?

What if each snake has 4 or more rectangles?

What if the snakes swallowed their tails?

# Problem of the Week

1. How many squares are there in the pattern above? (Don't forget the  $2 \times 2$  and  $3 \times 3$  squares.)
2. How many squares (of all sizes) are there in an  $8 \times 8$  checkerboard?
3. How many squares (of all sizes) in a  $20 \times 20$  checkerboard? (Is there a shortcut?)

PFS

33-5

**Problem:**

**How many triangles are there in this figure?**

How can you organize your counting?  
Are there any short cuts?
